

The Improvement Challenge

How local health performance information creates opportunities to improve rural and remote health outcomes

Waterfront 1, Darwin Convention Centre
Sunday, 24 May 2015

A pre-conference event hosted by the Australian Healthcare and Hospitals Association and the National Health Performance Authority.

This is a workshop designed to help rural and remote health service managers, clinicians, consumers and researchers make better use of data to improve patient experiences and outcomes.

The workshop will focus on data and evidence available to Local Health/Hospital Networks and to the new Primary Health Networks that are due to begin operations on 1 July 2015. The workshop will also explore both international and Australian experiences with performance measurement and will equip participants with a greater understanding of the local health data available to them and how it may be best used for improving health service and healthcare performance.

Participants will have the opportunity to identify data they need, even data that may not yet be available, and to have a conversation with key government and non-government agencies about the practical support they need to measure and improve health service performance and the health and wellbeing of the people within their region. The workshop will provide several real-world examples for participants to experience too.

Speakers will include Alison Verhoeven, Chief Executive of the Australian Healthcare and Hospitals Association, Diane Watson, Chief Executive of the National Health Performance Authority, a senior officer from the Federal Department of Health, and health care managers and researchers experienced in rural and remote healthcare delivery.

Location: Waterfront Room 1
Darwin Convention Centre
Sunday 24 May 2015
9.00am-3.00pm
Cost: \$125 (gst inc)
